SUMMARY

Backend and Infrastructure Engineer focused on high-availability systems. Experienced in **Linux Administration**, **Docker**, and **Distributed Systems**. Passionate about **Blockchain Infrastructure**, node reliability, and institutional-grade monitoring platforms using Grafana and Prometheus.

TECHNICAL SKILLS

Languages: Go, Python, JavaScript, TypeScript, SQL, Bash Scripting

Infrastructure: Linux (Ubuntu), Docker, Ansible (IaC), CI/CD, AWS (EC2, RDS, S3)

Monitoring: Grafana, Prometheus, Metrics Collection, Logging, Alerting, Uptime Optimization

Backend & Security: REST APIs, Node.js, FastAPI, JWT, RBAC, Multi-Factor Authentication (MFA)

Systems: PostgreSQL, MongoDB, Redis, Distributed Systems, HTTP/TCP Networking Protocols

PROJECTS

Blockchain Node Infrastructure Simulator

- Simulated **Proof-of-Stake (PoS)** node operations to monitor system health and network connectivity.
- Developed Python scripts for automated **Node Health Monitoring** and failure detection, ensuring 99.9% simulated uptime.
- Implemented automated alerting for performance bottlenecks and synchronization issues.

Distributed System Monitoring Dashboard

- Engineered a monitoring stack using **Python-based collectors** to track CPU, memory, and throughput.
- Designed custom **Grafana-inspired dashboards** for real-time infrastructure visualization and system reliability.
- Integrated data collection endpoints to handle high-frequency metric ingestion from distributed nodes.

Zero Trust Access Platform

Sep 2025 Present

- Architected a cloud-native security platform using **Go**, **PostgreSQL**, and **AWS** with **Docker** deployments.
- Developed 10+ secure REST APIs for robust authentication, session management, and RBAC.
- Enhanced security posture by implementing MFA and cryptographically secure session handling.

EXPERIENCE

Software Development Engineer Intern

Jan 2025 Feb 2025

Exposys Data Labs (Remote)

- Optimized SQL queries and backend services, improving system performance and reducing latency.
- Developed full-stack features using React and REST APIs with seamless third-party service integration.
- Participated in the full SDLC, including debugging, testing, and CI/CD deployment cycles.

OPEN SOURCE & ACHIEVEMENTS

- Open Source Contributor (Code Guardian):** Implemented Python-based taint analysis for security vulnerability detection.
- GATE 2026 Candidate:** Actively preparing for Graduate Aptitude Test in Engineering to deepen CS fundamentals.

EDUCATION

Vellore Institute of Technology, Bhopal

Aug 2023 Dec 2027

B.Tech in Computer Science

CGPA: 7.78 / 10

Relevant Coursework: Computer Networks (TCP/IP), Operating Systems (Linux), Data Structures & Algorithms.
